# Dan Andrews

Senior / Lead Product Designer · AI products, design and code

London, UK · Full right to work in the UK · hello@cybercyber.ai · cybercyber.ai · linkedin.com/in/iamdanandrews

Senior product designer who designs AI products where people review, approve or override what the software does, and builds them in code. Ten years across developer tools, financial data, clinical software and consumer apps, including three and a half years as a Senior Product Designer at Spotify. Independent since July 2026, available for contract and permanent roles.

## EXPERIENCE

### Independent Product Designer

cyber:cyber, my own studio / contract and project work, plus own products — Jul 2026 – present

- Left Spotify to work independently: senior product design on contract and project terms, alongside building my own products.
- Client work includes Bittensor: art direction and a generative identity system, delivered as code.
- Shipped two products end to end, design and code: **Kaido**, a clinical workspace on web and native iOS, in private pilot with a practising physiotherapist; and **Frame**, a training journal released on iPhone and Android.
- Build with AI coding agents: JavaScript and Node with Postgres and AWS S3 (Kaido web app and API), Swift and Kotlin (Frame on iOS and Android), and hand-written HTML, CSS and JavaScript (cybercyber.ai; code at github.com/iamdanandrews).

### Senior Product Designer

Spotify / Portal and Developer Experience (contract, then permanent) — Nov 2022 – Jun 2026

- Led design of Spotify's developer portal, built on Backstage, from alpha to general availability: software catalog, scaffolder templates and onboarding. Used by Spotify's engineers and, as a SaaS product, by external customers.
- Designed higher-level views over Spotify's observability tooling, so engineers could understand and act on the health of their services without knowing every underlying tool.
- Designed how platform teams govern configuration at scale, and how engineering teams install, update and recover plugins.
- Designed how teams see and act on the cost and reliability of the services they own.
- Before joining, led a ten-week engineering-experience research engagement for Spotify via Elsewhen (2022) that informed infrastructure OKRs and investment priorities.

## EARLIER EXPERIENCE

Product design and research at Elsewhen and Wunderman Thompson, and for start-ups, scale-ups and consultancies including Risika (credit-risk data), Epic Games, BCG, Dell, InsideOut (mental health), NHS / Public Health England (clinician tools during COVID-19) and Rolls-Royce. First design hire at Mo, from pre-seed through Series A.

## SKILLS

**Build:** AI coding agents (Claude Code, Codex) · HTML, CSS, JavaScript, Node · Swift · Kotlin · Postgres **AI:** AI product design · human review and approval flows **Design:** product strategy · user research · interaction design · information architecture · prototyping in code · design systems · Figma

## EDUCATION

MSc Experimental Psychology, University of Bristol · BSc International Management, University of Bath · UX Academy, Designlab · Design mentor at Designlab, CareerFoundry and Springboard
